

Flight Planning Statistics

Tremendous cost cutting are achieved through the Flight Planning Statistics. Over capacities and empty seats are discovered at an early stage. Fast reactions are supported and flights can be planned more efficiently and accurate.

Early warning system: All relevant data of bookings, departures etc. are tracked and stored. They are accessible through the web-based platform and differences between purchased and sold seats are displayed just-in-time. Critical flight situations will be highlighted due to individual settings. Special measures such as short-term fare reduction can be initiated to increase flights occupancy.

Fare reductions can be set directly in the database and will be forwarded automatically to the reservation systems.

Corporate Profile

Lamberth Travel Solutions is a service provider for the international air travel industry.

We offer our customers a **wide range of outsourcing services and consultancy for complete back office processes**, supported by own software systems and our dedicated travel industry professionals.

We globally market our proprietary software and web-services, which our customers use to **optimize their back office activities** e.g., in the Revenue Accounting, Finance, Administration and Sales department.

Through our highly automated Business Process outsourced (BPO) services and state-of-art software systems, **our clients improve their financial performance** and can focus on their core and strategic issues.
