

Transhotel web interface

The Transhotel web interface is a web application that enables you to access the Transhotel XML interface. This gives End customers the possibility to use the functions of the Transhotel reservation system through your own website. By easy configuration of the login data the system can be used by new travel agents. The layout can be altered by us freely to customer needs.

The application has been developed under the use of ASP.NET. By this a connection and adaption to nearly all third party systems is possible with a minimum of effort by state of the art techniques. The ASP.NET architecture is dedicated to high frequency websites and easy scalability.

The interface uses up-to-date AJAX components. This achieves best usability and a contemporary look & feel. For additional "Web 2.0 functions", known from other web applications, an optimal basis is given.

The application can be hosted on the customer's server or on the servers of the Lamberth GmbH.

Corporate Profile

Lamberth Travel Solutions is a service provider for the international air travel industry.

We offer our customers a **wide range of outsourcing services and consultancy for complete back office processes**, supported by own software systems and our dedicated travel industry professionals.
